- 1 Introduction
- 2 KIELER leveraging Ptolemy semantics — KlePto
- 3 Vergil using KIELER layout features
- 4 Summary and Outlook

# KIEL — Kiel Integrated Environment for Layout

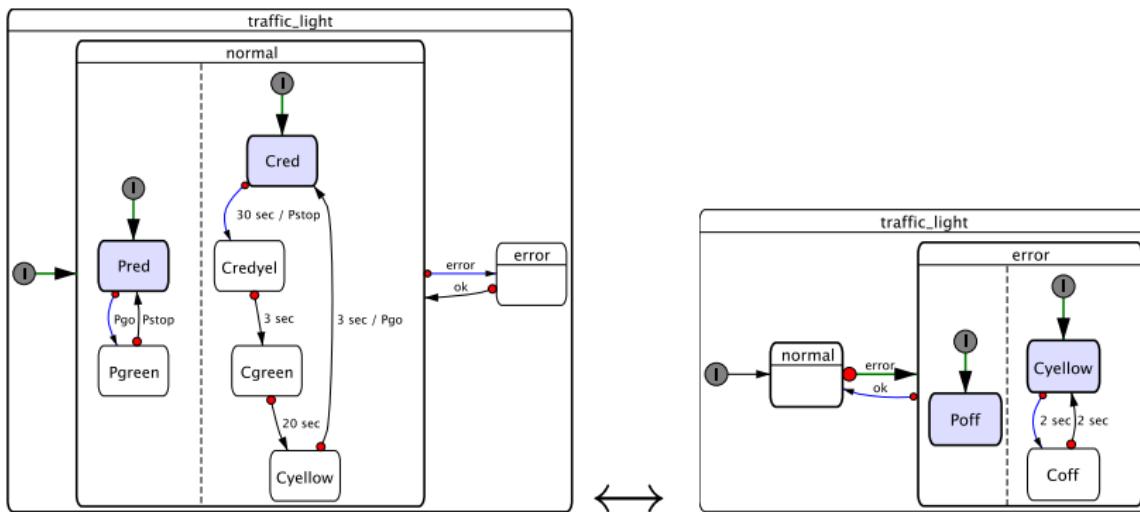

- Enhance **Pragmatics** of graphical modeling
- Free user of manual layouting of diagrams
- New ways of user interaction and presentation of graphical models
- Consistently apply Model-View-Controller paradigm
- KIELER: KIEL for the Eclipse RichClientPlatform

# Model-View-Controller in KIELER

## Example: Dynamic Charts

# Graphical Models: Ptolemy vs. Eclipse Domain Specific Modeling

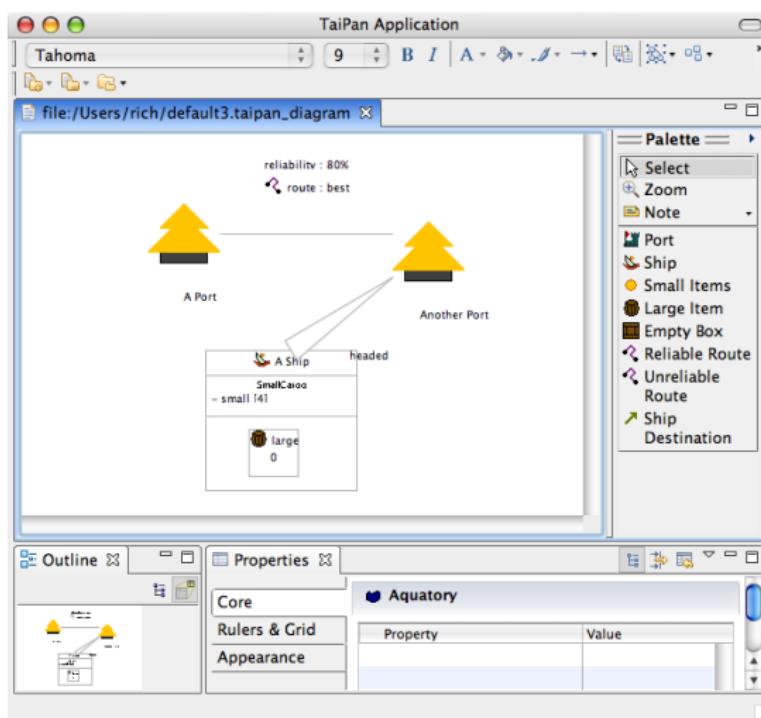

## Ptolemy

- Mainly one graphical syntax
- Many different semantics — models of computation
- Strong focus on semantics — simulation of models

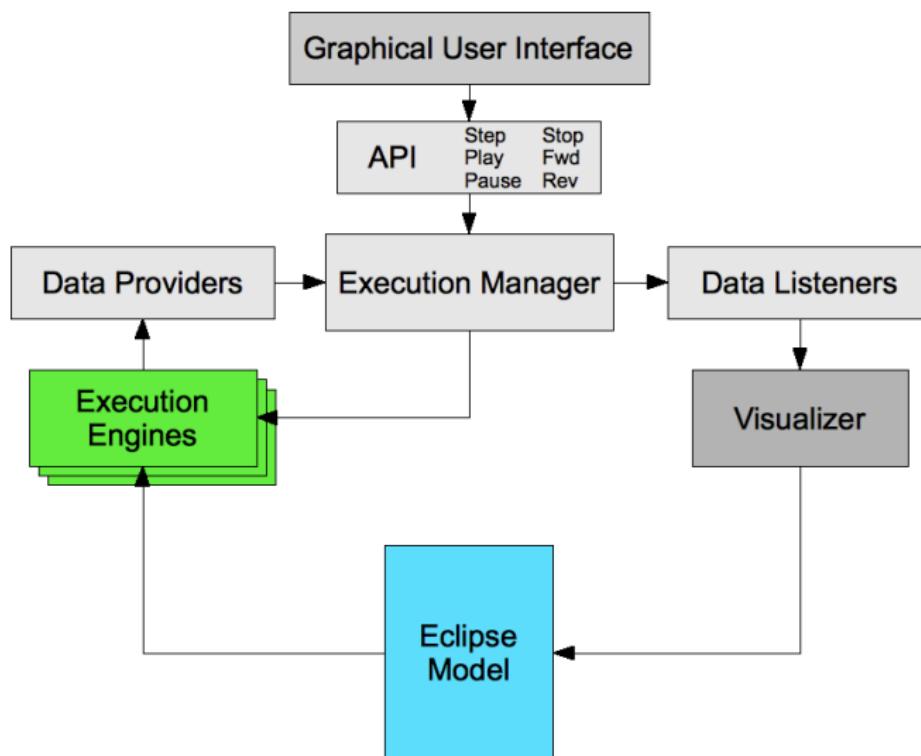

## Eclipse GMF — Graphical Modeling Framework

- Framework to build Domain Specific Languages (DSLs)
- Multiple custom graphical syntaxes
- Only graphical editor — only syntax no semantics
- Generative approach: Custom code generation frameworks with powerful template languages

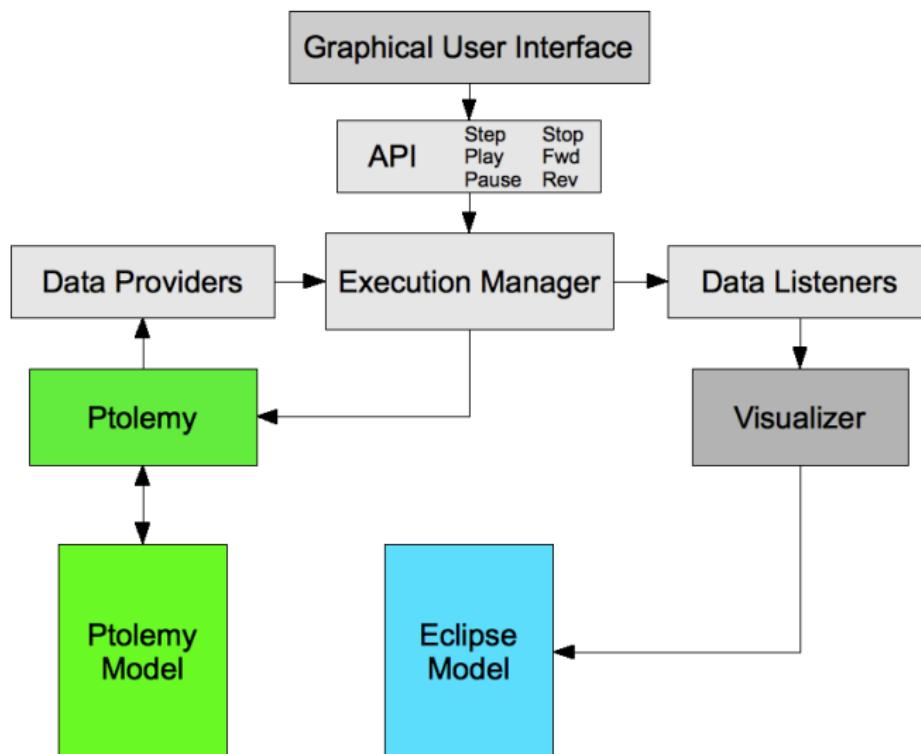

# Domain Specific Language Example

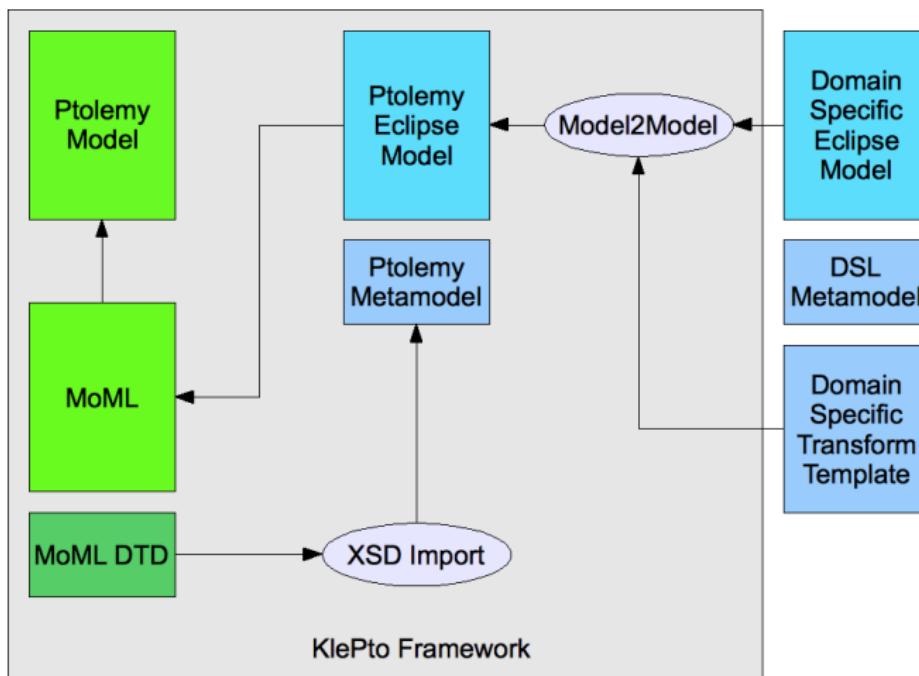

# Introducing execution support to Eclipse models

# KIELER leveraging Ptolemy semantics — KlePto

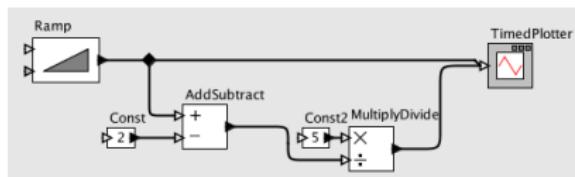

# From Eclipse Models to Ptolemy

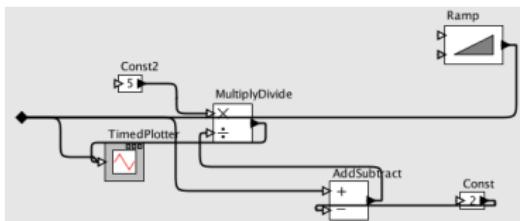

# Vergil using KIELER layout features

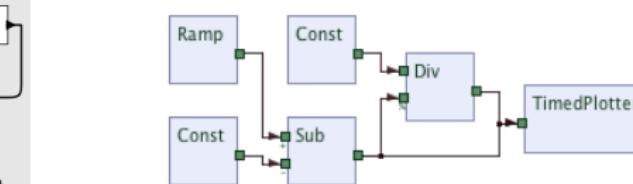

Key enabler for KIELER paradigms: **Automatic Layout**

Original Diagram

GraphViz based Layout

KIELER Layout of Dataflow Diagrams

# Algorithm Approaches

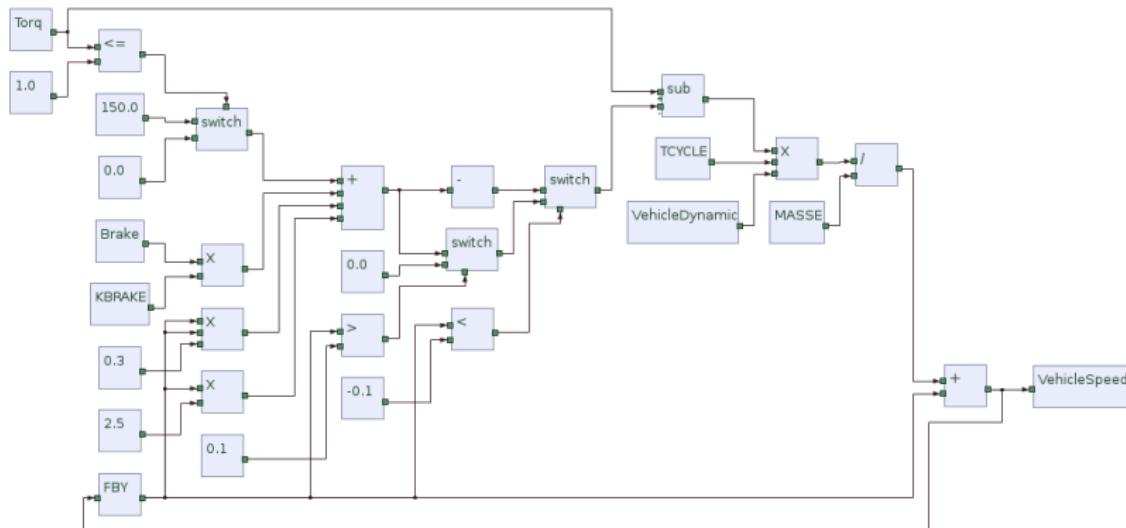

## The Layered Approach (a.k.a. Hierarchical Layout)

- ① Cycle removal
- ② Layer assignment
- ③ Reduction of edge crossings
- ④ Node placement
- ⑤ Edge routing

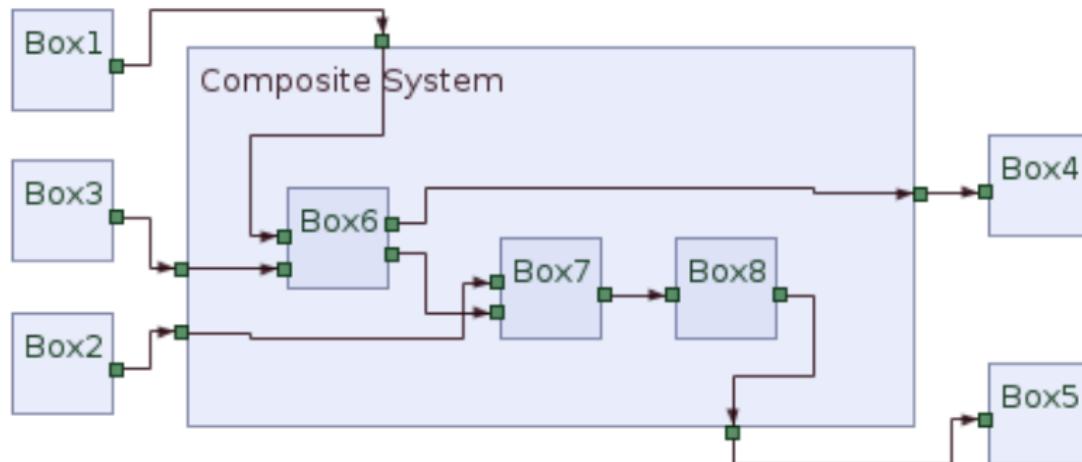

## The Topology-Shape-Metrics Approach (a.k.a. Orthogonal Layout)

- ① Planarization (*topology*)
- ② Orthogonalization (*shape*)
- ③ Compaction (*metrics*)

# Example Layouts

# Displaying Hierarchy Explicitly

# Summary

- KIELER is a framework to enhance **pragmatics** of graphical modeling
- Key enabler is **automatic layout**
  - New layout algorithms developed supporting **port constraints**
  - These standalone Java algorithms could be used in other contexts (**Vergil**)
- Introduction of execution of models in Eclipse
  - Employ Ptolemy as generic simulation engine
  - Ptolemy metamodel generated from MoML DTD

# Future Work

- Implementation of Eclipse Execution Manager and configuring M2M transformation from Eclipse to Ptolemy
- Enhancing layout algorithms (especially orthogonal layouter)
- Build advanced interaction paradigms on top of the auto-layout
  - Structure-Based-Editing
  - View Management for simulations
- Create more Eclipse graphical example editors
  - IEC 61499 Function Blocks
  - Esterel Technologies SCADE
  - Ptolemy?
