

# KIELER Layout

In the KIELER project, automatic layout algorithms serve as the key technology that enables other advanced features, such as focus & context, dynamic view creation, or interactive simulations.

The *Infrastructure for Meta Layout (KIML)* and our *Layout Algorithms (KLaY)* have been moved into an official Eclipse project: the **Eclipse Layout Kernel (ELK)**. This move required quite a few changes, ranging from plugin, extension point, and package name changes to a restructured KGraph. An incomplete list of the changes can be found on the following page:

[Migrating to the Eclipse Layout Kernel](#)
