Welcome to the KIELER Project's Wiki!

The *Kiel Integrated Environment for Layout Eclipse RichClient*, or short [KIELER](#), is a research project about enhancing the graphical model-based design of complex systems. It is developed by the [Real-Time and Embedded Systems group](#) at [Kiel University](#).

Using This Wiki

The Wiki is structured as follows:

Overview The overview section gives you an idea of how KIELER is structured and what parts there are. KIELER has grown quite big, so reading through the overview will help a great deal in finding your bearings around here.	The Different Components of KIELER We have taken care to divide KIELER into several components, which in turn are divided into several projects. This makes the KIELER project a little easier to understand, we hope.	Development The development section has our guides on how to start as a new KIELER developer (the Guidelines are of particular interest; go read them!), some more guidelines and generally acts as a documentation of our daily work, including Meetings .	Processes The processes section contains documentation about the processes we use to manage KIELER.
--	--	---	---

We use the Wiki to document the project, its different components, the processes we use to manage it, and whatever else needs documenting. As a KIELER developer, please feel free to add content to the Wiki. If you're unsure about where to add the content to, just ask one of the senior developers – they'll be happy to help.

Getting Help

This Wiki is the main source of documentation for the KIELER project. If you'd like to get in touch with the team, either search the [group's web page](#) for e-mail addresses, or use the following channels:

- [Announcement Mailing List](#)
KIELER releases and important project updates are sent to this low-traffic mailing list.
- [Developer Mailing List](#)
Every KIELER developer is expected to be on our developer mailing list to stay up to date on announcements and information relevant to developers.

Also take a look at [demos and tutorial videos](#) we have put together.

Development

Here's the list of tools we use:
